COST

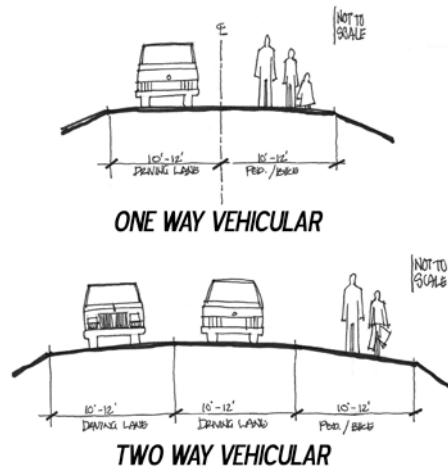

Not Constructed

## COMPLETION

Construction  
Documents 2010

TYPICAL 12' MULTI-USE TRAIL SECTION THROUGH PARK WITH SHOULDERS  
N.T.S.

## Project Description:

The project consisted of the development and implementation of a 1.5 mile long multi-use paved trail meandering through a combination of roadway, greenway and drainageway corridors. The scope included inventory of existing roads for use as on-road bike trail as well as over a mile of asphalt trail, grading, piping and retaining walls.

The trail was designed to accommodate a new park entry gate designed in house and to preserve existing trees along the new trail alignment.

Design development and a complete set of construction documents were prepared for this project in addition to conducting public input meetings.

*Project completed while with M2D design group, Lexington, KY.*
