## **LFUCG Division of Water Quality**

## **Deep Springs Pump Station Landscape Update**

Landscape Enhancements + Redesign

## **Project Description:**

PLA was requested to perform landscape design & planting plan updates for a recently constructed and landscaped sewer pump/lift station in a residential area of Lexington, KY. The project included the addition of new landscape plant materials, reuse of others and enhancing other existing amenities such as the large Pin Oak tree located at the southeast corner of the site. Providing additional visual screening via plant material was required as well. As an assist to the maintenance staff all plant materials were requested to be woody shrubs and trees. All other herbaceous plant materials were eliminated from earlier versions of the plan.

The project was put out to bid in Summer/Fall 2014.
