COMPLETION

2010

Project Description:

Scope of work included viewing, reviewing, analyzing, and providing landscape recommendations in a clear written and graphic format to assist in the improvement and beautification of the Winchester Road corridor (US 60) on Lexington's eastside, beginning near downtown at East Loudon Ave. and ending at a major entry point to the city at Interstate 75/64 (approx. a 3 mile corridor). Identification of corridor character zones, land use zones, and various positive and negative visual qualities was used to develop design guidelines. Recommendations for this blended agricultural and urban corridor included the addition art installations, multi-use trails, neighborhood connections, signage walls, gateways and landscape plantings.

Project completed while with M2D design group, Lexington, KY.
